History: This message has been replied to.

Effective today, my detail to work as a DOI liaison to the NIC Interagency Solutions Group had ended. Therefore I will not be working with the FRTG technical teams.

However, I have been asked to assist OEPC with the USGS PRFA/funding paperwork@ MMS HQ, and will copy Lori on that correspondence.

Thanks.

Subject: flow rate and volume estimate process

Dear Team,

We want to ensure that a proper administrative record is maintained for the work being done to estimate oil flow rate and volume. This will become important for future actions involving BP and other responsible parties. Lori Caramanian will be the DOI point person charged with ensuring that a good administrative record is produced and maintained. There will also be administrative record leads from NOAA and USCG. Please keep Lori in the loop on the workings of the FRTG, including all of its subteams, and any other rate/volume estimation exercise, by including her on all emails to the team and in all conference calls. She will be able to help decide what needs to be documented and how best to organize and maintain the record. Thanks for your help with this.
